

EYESPRAY 822000

GIA Premix EYESPRAY is a new fast and effective first aid with two spray bottles in a wall mounted cabinet containing a sterile sodium chloride solution.

When pulling the cover down the two bottles activates automatically and let you have both hands free to keep your eyelids open.

After activation and closing the cover a red flag indicates that bottles have been used and gives you a reminder of replacing the bottles

Suitable locations are industry facilities, laboratories, helthcare facilities and all environments with limited access to the water mains.

Each bottle has a shelf life of 2-3 years.
